

## 2.5Gbps 1490nm DFB LD TO-CAN (Non-Sphere)

Classification:[Laser Product](#)

- Data rate up to 2.5 Gbps
- 1490nm typical emission wavelength
- Wide temperature range operation from -5°C to +85°C
- TO56 package with 7.5mm focus length aspherical lens
- Uncooled DFB LD chips

The [2.5Gbps DFB LD TO-CAN Non-Sphere](#) is an innovative and important component in the field of optical communication and related applications.

The DFB LD is a key feature of this device. With its distributed feedback mechanism, it can generate a highly stable and single - mode laser output. This is crucial for applications where precise and reliable optical signals are required. The ability to operate at a data rate of 2.5Gbps makes it suitable for a variety of medium - speed optical communication links, such as in local area networks or metro - area networks.

The TO-CAN packaging provides excellent protection and thermal management. It encloses the DFB LD in a compact and robust housing. This not only shields the delicate laser diode from external environmental factors like dust and moisture but also helps in dissipating heat effectively. Good heat dissipation is vital for maintaining the performance and longevity of the laser diode, especially during continuous operation.

The non-sphere design is another notable aspect. It offers improved optical coupling efficiency compared to traditional spherical designs. This means that more of the generated laser light can be effectively coupled into the desired optical path, reducing losses and enhancing the overall performance of the optical system in which it is used. In summary, this 2.5Gbps DFB LD TO-CAN Non-Sphere component is a great choice for applications demanding stable, medium - speed optical signal generation with efficient optical coupling.

In summary, this 2.5Gbps DFB LD TO-CAN Non-Sphere component is a great choice for applications demanding stable, medium - speed optical signal generation with efficient optical coupling.

Applications

- Data communications
- SDH telecommunications
- Other optical transmission system

Parameter

Absolute Maximum Ratings

Parameters	Symbol	Min	Max	Unit
Reverse Voltage(Laser Diode)	VRL		2	V
Laser Forward Current	Iop	-	100	mA
Peak Optical Output Power	Po	-	20	mW
Operating Temperature	Top	-5	85	°C
Storage Temperature	TSTG	-40	100	°C
ESD Voltage	HBM≥500			V

Electrical/Optical Characteristics ( T=25°C )

Parameters	Symbol	Test conditions	Min	Typ	Max	Unit
Optical Output Power	Po	CW,Ith+20mA	6	-	-	mW
Threshold Current	Ith	CW,Tc=25°C	-	-	15	mA
		CW,Tc=85°C	-	-	30	
Operating Voltage	Vop	CW,Ith+20mA	-	-	2	V
Slope Efficiency	SE	CW,Ith+20mA	0.3	-	-	W/A
Center Wavelength	λ	CW,Ith+20mA	1480	1490	1500	nm
Spectrum Width (-20dB)	Δλ			-	1.0	nm
Side-mode Suppression Ratio	SMSR		35	-		dB
Series Resistance	Rs	CW,Ith+5 to Ith+20mA	-	-	15	Ohm
Po-Kink	-	CW,Ith+5 to 70mA	-	-	30	%

Distance between Reference Plane to Fiber	FL	7.2	7.5	7.8	mm
----------------------------------------------	----	-----	-----	-----	----
